

Erdem Ustaal

I was born in 1998. I was "gifted" in technology. Nothing in this world gave me excitement as much as programming did. I got addicted to coding when I was 11. I discovered AI at the age of 13 and, after that, it was my passion. After high school, I went to the USA to fulfill my dream of being a Computer Sciences major. Around my senior year, I got diagnosed with diabetes and, after that, it became my commitment to contribute new technologies for people with diabetes like me. Nowadays I am developing my own fully Artificial Intelligent Insulin Pump system. It is called Project : Epsilon C-135.
