

Kamil Quiliyev

I was born on September 19, 1998. I was diagnosed on August 21, 2008. In 2013-2014, I became a member of the Azerbaijan Diabetes League (ADL). Attending summer camps, and especially diabetes schools have brought me great positive changes. I always feel very strong, both physically and psychologically. I have a bachelor's degree in Computer Science and I'm working in several organizations, including ADL. I manage all social network accounts, the YouTube channel, and the website of ADL. My hobbies are watching movies & TV shows, running, cycling, etc. Also, I love art, music, and dance. Actually, I'm always curious to try new things. There are many people in Azerbaijan, especially young people, who are unaware of their diabetes. And I want to solve that problem by participating in this programme. Educating and raising awareness about diabetes and mental health is very important. I want to be part of the international diabetes community and to share everything I learn with local organization followers and my diabetic friends.
